Proof of Delivery

Key Features

- **Find proof of delivery instantly!**
- **Electronically speeds up the delivery process.**
- **Collect signatures on mobile device for proof.**
- **Search, find, print reports, and email to customer.**

Overview

This delivery application by MSS Software is a mobile proof of delivery system that allows the user to collect signatures and other useful information when delivering packages and items to customers. Ideal for hospitals, manufacturing, businesses, etc. that are making in-house deliveries to their users. It is meant to speed the process of deliveries but at the same time have all the information collected digitally so that this information can be searched quickly or printed out in proof of delivery reports.

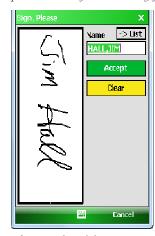

By using Proof of Delivery you can provide management with an easy way of looking up deliveries and providing proof that a delivery was made.

Sample screen shot of the main entry form.

Mobile Delivery Device

The heart of this system is the mobile devices, which can be used by the delivery person to collect the necessary information. The process is as follows:

1. Delivery person signs in
2. Location is entered
3. Delivered Item # is scanned
4. Signature of customer is captured
5. Other fields such as PO# or Memo are optional
6. Each record us date/time stamped

POD Database System

The delivery system also provides the user with an SQL database system to store all of the delivery transactions into so that the records can be pulled up at any point in time through queries and printed out into a report. You can also perform queries/searches by Item, Location, PO, etc.. And view or print out a report.
