

EasyCoder PC4 Printer

The EasyCoder PC4 is one of the best desktop barcode printers around! The printer's compact size, sturdiness, and silent operation make it ideal for a variety of applications. It is available in thermal or thermal transfer at 200 or 300 dpi, and it's built to withstand rugged environments. The Intermec PC4 prints up to three inches per second, and it prints all standard barcode formats and graphics, including 2D codes. (The PC4 is not meant for extremely heavy duty use but will print reliably for most applications.) **This printer can handle a variety of label and tag stock on synthetic or paper material up to four inches wide or smaller.**

The Intermec PC4 comes with all-inclusive software, drivers, cables, labels, a Quick Guide, and a PrinterCompanion CD with label design program, Windows™ driver and documentation. You can use its Active x drivers to print from Word, Excel, or Access database. It also has an USB, Parallel and RS-232 port or optional network card. **You can even make this a stand-alone printer using a special keypad**

to call up and print formats stored inside the printer, so you don't have to be connected to a computer.

The EasyCoder PC4 **prints faster and with better quality** than competing printers in its price range, and includes dual print technology for printing on various label types; both Direct Thermal and Thermal Transfer. The new, unique double clam shell design makes it **extremely easy to load supplies** with the simple drop-in method. Exchanging label and ribbon rolls can be done rapidly. The RS-232 and Centronics interfaces are standard, which allows easy communication with the printer. Firmware can easily be upgraded thanks to the Flash memory.

The EasyCoder PC4 printer comes with standard features like Peel-off operation with Label-Taken sensor and Black mark sensor. Among its optional features are:

- Flash memory cartridge
- SRAM memory cartridge
- Serial cable
