### Pocket-Sized Barcode Reader

The Cipher Portable Terminal is a lightweight, pocket-sized barcode reader ideal for simple data collection. It can easily be used for taking inventories, tracking time and attendance, tracking assets, or performing general barcoding.

MSS Software's specialists have tested this unit in a number of environments and applications and are very familiar with its capabilities. This barcode reader works well for taking inventory, where the user has to scan or enter the location, part number, and quantity. The Cipher Portable Terminal also functions extremely well in a seminar/meeting environment, where the user has to scan badges to record the time and date an attendee arrives at a specific location. Because of its lightweight and ease of use, this reader is also great for retail applications.

### Lookups

Users of the Cipher Scanner can do simple lookups by loading lookup files. For example, users first scan a product id, which pulls up the description, price, and quantity. Users can change one or more fields, if necessary, for later upload to the database.

### Communications

Transferring data from the Cipher scanner is a very simple process. The user just sets the barcode reader into its communications cradle and clicks on the transfer button. Using the PC communications software, the system allows you to transfer data into a .txt file, .csv file, or other text type files of your choice.

### Other Features

Lost data is a thing of the past because the unit has a backup battery to retain your data if the main battery dies. The scanner provides superior scanning ability. It can scan at distances from 3 inches on up depending on the density of the barcodes. Other features include:

- Alpha Numeric keyboard with shifting
- Operates from 0 degrees F to 140 degrees F
- Over 100 working hours off 2-AAA Batteries
- Complete with communications transfer utility
- Weighs less than 5 oz.
