

Ticket Checker

Key Features

- Process tickets faster and more effectively using barcodes.
- Prevent duplicate ticket holders from entering.
- Rent or purchase the scanner and program.

Overview

With Ticket Checker you can quickly and accurately check tickets at concerts, events, and symposiums. We have three different products:

- *Basic Ticket Checker:* Allows you to scan all tickets and prevent duplicate ticket entry.
- *Advanced Ticket Checker:* Allows you to add a lookup table onto the scanner for verification.
- *Wireless RF Ticket Checker:* Allows you real-time verification of a ticket number in a centralized database.

By using Ticket Checker you can automate your event's attendance procedure. If duplicate tickets are found, entry can be prevented.

Basic Ticket Checker

This program allows you to scan the unique barcode printed on a ticket and collect that particular ticket number into the memory of the handheld device. If that same ticket number is ever scanned again, then the handheld barcode scanner emits a loud beep and gives a visual alert. This allows the ticket checker to stop the incoming illegal ticket holder.

- \$125/week to rent the scanner.

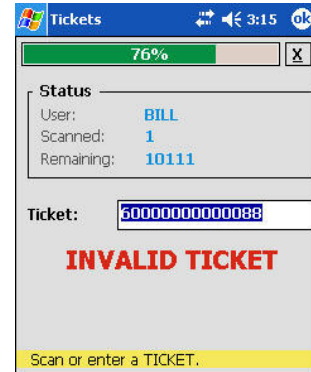

The CN2 Scanner is used with the Advanced Ticket Checker. It allows you to use lookup tables.

Advanced Ticket Checker

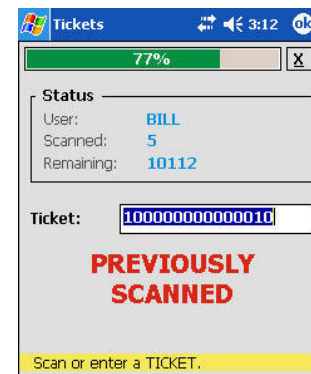

With Advanced Ticket Checker you can download a lookup table onto the scanner, so when you scan a ticket it looks to see if that number exists. If it does, the scanner reports back a good scan. If the number is not in the lookup file, the scanner reports back 'Invalid Ticket'. If a barcode is scanned twice, then you get an immediate notice of 'Previously Scanned' on the scanner screen.

The CN2 Scanner is used with the Advanced Ticket Checker. The scanner is also able to save all the barcode records, and each scan is date/time stamped for later viewing. This feature allows you to analyze your event, look at traffic flow, and improve staffing for the future.

- \$175/week to rent the CN2 scanner.
- \$3500 to purchase.

RF Wireless Ticket Checker

If you need to verify each barcode by accessing a centralized database for verification, then use the RF Wireless Ticket Checker. This system allows you to verify a barcode number in real time, allowing only one entry per ticket.
