the right way to barcode

Inspections Made Easy

Inspector is a Windows based system used by schools, universities and hospitals to keep track of their fire extinguisher and safety equipment. Inspections that are done on a daily, weekly or monthly basis can be done in a fraction of the time using barcodes and barcode reading devices. In addition, this kit works with standard Microsoft Excel Spreadsheets in order to produce easy to use and easy to understand data that can be sorted in a variety of methods. Why not makes your inspections simple and easy to do?

Inspector Features

- Track Equipment Condition
- Track the Location of the Equipment
- Record the Type of Equipment
- Record the exact Inspection Date/Time

Benefits of Barcode Inspections

Inspector speeds up the process of doing inspections by using a simple mobile computer to scan barcodes on equipment and then update Microsoft Excel forms with the most current information. Paper forms and log sheets can be eliminated by using this simple barcode data collection system. Provide proof of compliance with other internal or external regulatory agencies by using this uncomplicated electronic method.

Key Features

- Track equipment using barcodes to create more accurate inspections
- Track safety equipment by location, condition and date and time of inspection
- Complete Kit includes software and mobile barcode device
- Uses Microsoft Excel to keep things simple and easy
- Save money and time using a simplified inspection system

1. Tag all equipment with barcode labels. All equipment is kept in a Master Excel Spreadsheet for use with the Inspector software.
2. During the inspection process, the inspector scans the item and notes its location and status. Each record is date and time stamped.
3. All data is stored on the mobile barcode device for later upload.
4. After the upload, Inspector then compares the new data with the old and discrepancies are displayed and action can be taken until the next inspection.
5. Complete electronic records are saved for future reference.

How to Order

The Barcode Inspection Kit consists of Inspection software, barcode scanner equipment and utilities for data transfer and barcode labels in order to keep your job as easy as possible.

Product # BIK-701 Barcode Inspection Kit

**Hazardous or Explosion Proof Barcode Scanners also available.*
